

Dominion Power: Construction & Use Permits

These Construction and Use Procedures have been developed by Dominion and representatives from local, state and federal governmental authorities and the surrounding communities. The objectives of the procedures are to protect environmental resources around the lakes and to permit use of the company's property by the public. While these procedures are designed to complement and incorporate the requirements of federal and state laws and regulations, they also incorporate the company's policies in reference to its property. As such, these procedures are administered at the sole discretion and authority of Dominion. Click [here](#)
